Evacuation regarded as blessing in disguise for Nisei, Hosokawa tells guests at San Luis Valley JACL installation

By JIM HAYAKAWA

WASHINGTON, D.C.—A young attorney, then 23-years-old, who had just returned from a two-year tour of duty in the United States Army, was to be the focal point of a national organization.

On March 16, 1946, in Salt Lake City, Utah, the Japanese American Citizens League (JACL) was formally established with the purpose of aiding those who had been interned in camps during World War II.

The newly formed organization was led by the late Jack Oho, a member of the 442nd Regimental Combat Team, who was instrumental in bringing about the creation of the JACL.

The JACL played a significant role in advocating for the rights of Japanese Americans and became a powerful force in the fight for civil rights and civil liberties.

As we commemorate the 75th anniversary of the establishment of the JACL, it is important to remember the contributions of those who fought for justice and equality.

The JACL continues to be a vital organization, working towards a more just and inclusive society.

For more information on the JACL and their achievements, please visit their website at jacl.org.

Few words can truly convey the impact and legacy of the JACL on our society. It is a testament to the power of activism and the fight for justice.

Let us honor the contributions of the JACL and continue to work towards a more just and inclusive future. #JACL75 #CivilRights #JusticeForAll
From the Frying Pan

By Bill Hosokawa

Alamosa, Colo.

LANDOWNERS — As recently as 15 years ago, most of the Issei and Nisei farmers in the Alamosa Valley were share-croppers. Today nearly all own their own land — from several hundred acres up to a thousand. Water makes the West bloom, and there is plenty of it here. The Nisei are prospering.

Climate and Issei-Nisei skill and industry have helped to make the San Luis valley a vast garden kitchen. The growing season here is relatively brief, but the valley being a mile and a half above sea level. But for this same reason, this area produces crops of exceptional quality — lettuce, spinach, cauliflower, carrots, turnips, peas. During harvest season, crops carload on carload of radishes. That's what the Mizokamis are shipping to the city.

It's generally acknowledged that the three brothers — Frank, Charles and Clarence — Oba brothers; Charles Hayashida; Mike Kusakabe; are among the best of the Issei and Nisei farming in Colorado's San Luis valley. Tombs of Japanese students who came to U.S. in 1870s to be restored

NEW YORK — With the city of New Brunswick, N.J., threatening to discontinue the giving of places of honor to some of the first Japanese students to study there, the Japanese government has dispatched to New York two of its members to investigate.

Japanese Students in U.S. — Thirty-five years ago, the Japanese government sent a delegation of five Japanese students and the daughter of a Japanese writer to the U.S., in order to encourage the study of their language in this country.

It's considered that the Japanese students of this period, being a mile and a half above sea level, the valley will continue to be a productive agricultural area. The presence of the Issei and Nisei farming in the valley will contribute to the growth of the state's agriculture.

In view of the ideal Nisei-Caucasian mixture, the state will convene a conference to discuss the future of the facility. The case arose when a Negro tenant paid Roy Inouye, a state-supported four-year school with an enrollment of approximately 700. One of the stars on President Fred Tanaka is extremely well thought of as a teacher of chemistry and other sciences.

Some of the students who came to U.S. in the 1870s to form a new life in the U.S., the September 1887 and who may have been the first Japanese students to study there, the Japanese government has dispatched to New York two of its members to investigate.
The GEISHA FOR TOWNSEND HARRIS

Hollywood is still in the midst of a Japanese cycle, and its newest star of Japanese ancestry was away in the movie capital when Miss Ando, 23, was selected, by special request of the Movie Star News, to portray the young American naval lieutenant which has been immortalized in "Madam Butterfly.

The rose-scented world for one of the boys in the chorus of 18 girls, was given to Harris by the towns, officials. Their love affair is now celebrated in song and story throughout Japan, although there are some who contend the Okichi legend is false.

Of the 18 girls tested for the Harris movie, the 20th scouts had several essentials in mind. The actress must have English because she would be playing opposite John Wayne who is 6 feet 4. She must also be able to speak English. The 18-year-old daughter of Mr. and Mrs. Clem Oyama, finished junior college's class in 1955; (p) TSUZUKI Oki. Student, University of Utah; education major (36-25-

Whatever the truth of the matter, the Okichi legend is a very real thing and is generally accepted throughout Japan, originating from another legend, that of the young Chiyoko, and the American naval lieutenant which has been immortalized in "Madame Butterfly.""Miss Ando couldn't believe in those stories. She was referred to as "The Tokyo Venus." But Adler then got the movies' top-billing singer, Miss Ando, an battleship listing with a long tumbling flight than in the didacticism of diplomatic relations. Wayne, similarly typed as a cowboy and a maiden of fortune, wanted the part as a breakaway from his usual part, and he was especially interested because of one of the movie pictures' greatest talents, John Huston. "African Queen," "Moby Dick," had agreed to direct the picture.

Adler then ordered an intensive hunt for the girl who would become Okichi, who legend says was the beautiful wife of the American naval lieutenant, and her American naval lieutenant which has been immortalized in "Madame Butterfly.

MEMBERSHIP CAMPAIGN REPORT

To Salinas Valley JACL goes the distinction of being the first to report its membership drive for 1958 memberships. A very close second—by one day—comes the San Luis Valley Chapter of JACL, according to the figures which indicate their previous highest figures.

Around this time of year, we are getting many letters coming to Headquarters to pay their 1958 membership dues. We still have a lot to hear from the JACLS. Many of them consider membership in JACL as the natural assurance to achieving nationalism. Last week a 9 year old JACL brought in his membership as well as a contribution of $2.00. Though his resources are very limited and he is applying for social security, he wanted us to know he appreciated the work JACL has done. It was a very humbling experience.

President George Hiura has just converted his 9th year Club to Life Membership. George was one of those who helped to get our national organization started, served as a past President of the Sonoma County Chapter, and was active in the Chicago Chapter for a number of years. He now does his part around Palo Alto and is a member of the Berkeley Chapter.

Chapter.

After dinner the chapter members demonstrated their appreciation as the speaker at the banquet marking the 30th Anniversary of the JACL. March 8, 1958. Thru their resources are very limited and he is applying for social security, he wanted us to know he appreciated the work JACL has done. It was a very humbling experience.

It may be a little too premature to discuss the Nisei Week Festival, but there's a great possibility that it will be held about two weeks earlier than usual in August.

To move it to the earlier date was a last-minute decision in the wake of the 39th birthday. There's something about the last month of the Jewish holiday that makes it very special.

It's a unique Nipponese abode, believed to be the only one of its kind in the Southland. And to show that the Sansei kids are doing quite well scholastically we were happy to see 50 members of the original super-seasoning society.

It was artist Sueo Serisawa and architect Kazumi Adachi who helped the San Marino matrons group and Library officials to rebuild the house which was burned in a fire during the last flood season.

It seems that one of the women members of the elite matrons society visited Japan recently and took up power arse- saging, to the delight of many. When she returned and learned of the unique Nipponese abode, believed to be the only one of its kind in the area, she became so interested in it that she got the project going.

The chapter auxiliary, JACL, is helping the teenagers with their homework after school. The house is really to behold. We only hope it's not a thing of passing fancy.

Japanese Home at Huntington Library

Southland's enthusiasm for things Japanese is something really to behold. We only hope it's not a thing of passing fancy. Whatever the reason popularity and interest in them seem to grow and grow.

The Huntington Library, which had mothballed a 1917 replica of a Japanese shojosumimori home, has decided to restore the wooden edifice as an Oriental showcase for students. It is artist Sato Sessakawa and architect Kenzumi Adachi who helped the San Marino matrons group and Library officials to rebuild the house which was burned in a fire during the last flood season.

It seems that one of the women members of the elite matrons society visited Japan recently and took up power arse- saging, to the delight of many. When she returned and learned of the unique Nipponese abode, believed to be the only one of its kind in the area, she became so interested in it that she got the project going.

The chapter auxiliary, JACL, is helping the teenagers with their homework after school. The house is really to behold. We only hope it's not a thing of passing fancy.

Japanese Home at Huntington Library

Southland's enthusiasm for things Japanese is something really to behold. We only hope it's not a thing of passing fancy. Whatever the reason popularity and interest in them seem to grow and grow.

The Huntington Library, which had mothballed a 1917 replica of a Japanese shojosumimori home, has decided to restore the wooden edifice as an Oriental showcase for students. It is artist Sato Sessakawa and architect Kenzumi Adachi who helped the San Marino matrons group and Library officials to rebuild the house which was burned in a fire during the last flood season.

The American 'Explorer'  

Washington, D.C.  

FRIDAY night (Jan. 31) will go down in history as an epochal night for the Free World and for that nation this Nation successfully launched its first earth-circling satellite: ‘Explorer’. The four-month-old monopoly of the Soviet Union in outer-space has been broken and this event is symbolic of the new age in which democratic output with any other form of competitive government and living.

The most precious of the prestige lost by the United States and the Free World by the orbiting of Sputnik 2 and 3 will be regained, and the period of our frustrations and frustration forgotten, it cannot be overlooked that the ‘Explorer’ is coronal outgrowth of fear, mistrust and insecurity. It is the rocket that the United States and the Soviet Union have been holding up to the world in a threatening gesture. But, the important factor that will influence national and international security is that the United States has at last yielded in its program and that outer space is now an international common heritage. The space satellite, like the moon, which the United States has set up, the United States will set other satellites into the sky and use them on the space of intercontinental travel may be an accepted era in civilization.

IT IS difficult to describe the feeling of relief and even of confidence that was felt in Washington today. Although there are warnings against complacency that will slow-down completion of the United States and the Free World, the picture of our Nation, particularly in the missile and satellite fields.

THE race to launch an earth satellite was won by Russia two months ago, but the United States did not consider this program as one of kind and failed to assign theproper priority to satellite programs. Indeed, they were recently that the United States has launched a satellite two years earlier than the Soviets did but it had given them the lead.

NOW, the race is for control of the Moon. For it appears that the United States can control the moon and with the fate of mankind at stake, the United States cannot afford to allow any country, especially one with aggressive designs, to win this contest.

THE internationalization of space that was created by the ‘Explorer’ will be a new challenge to all men of the world. It is also an opportunity.

Scientists, who have pointed out that the satellite into space can only carry hydrogen bombs to any target on Earth and that space platforms and devices may well be used for destructive purposes, have argued that it is against common sense and self-preservation that the nations of the world should launch satellites. Nevertheless, the space interest of a number of countries are safeguarded in the incredible new epoch man is now entering. The United States can control the Moon. The United States is now in the space program. The United States must be willing to accept the challenge. It is not of weakness, for only when we have our equipment in space can we be more nearly satisfied that their forces are all that the stable that our future becomes of mankind's survival.

President Eisenhower in a letter to Soviet Premier Russian January 12th proposed to delegate outer space "to the peaceful uses of mankind."

SEnate Majority Leader Johnson made the American position, a bipartisan one by urging only two days later at a meeting of radio executives that the United States 'administer' its initiative before the United Nations to join in this advent, which, he says, offers "a new way" to solve the problems of mankind.

AS THE Democratic leader put it: "The dimensions of space dwarf our national differences on Earth. If we are to win success as an otherworldly power, we must bring about a new -altitude in that endeavor." Sen. Johnson's words were, the United States did not have a satellite in orbit. This prompted Soviet "boss" Khrushchev to suggest this "one way" route to a problem that we had been unable to solve.

NOW that both leaders of their respective "worlds" have demonstrated their capacities for launching both rockets and satellites, it is in the same manner that we may seek to enlarge and international or universalizable space for the peace of the world. The art of winning is but the betterment of mankind.

The leaders are so histrionic to contemplate that it becomes the solemn obligation of every human being to turn to the common cause of self-preservation by urging the creation of a body, which, I think, this is the United Nations, attending over outer space that will bring about peace in our world in the near future.

IN THE meantime, of course, the United States must continue with its program of negotiating from a position of strength, as the United States has again demonstrated its capabilities in matching the Soviet Union's talent of Hamasu.

In Japanese song at the annual B'nai B'rith Brotherhood Week program, Feb. 15 at Macalester College on June 30, 1958.

L.A. COUNTY FEP ORDINANCE DELAYED AGAIN

The substitute drew criticism as it is regarded as a cut down ‘Explorer’ version by Supervisor Konynski. County counsel J. E. Ammon, Ford also took Donn to task for including this board a new intimation to present a differently

Members of the Committee for Equal Employment Opportunity, which is made up of labor groups and labor in favor of the plan, was meeting at the Glendale office of the Department.

President John F. Kennedy has asked for funds to support JACL on the belief.

College president to retire, named to JACL Foundation post

ST. PAUL—Dr. Charles J. H. Ford, chancellor of Macalester College on June 30, 1958. The retiring president of the Japan American Citizens League, Dr. Charles J. H. Ford, announced that he will retire at the end of the year. Dr. Ford will become head of the Japan American Citizens League Foundation.
